Experience

Freelance Frontend Developer

Mar 2025 - Current

Self Employed

- Delivered a professional website for a client, increasing online visibility and customer engagement by creating a responsive, fast-loading website optimized for SEO.
- Improved website performance by implementing techniques like lazy loading for images and components, reducing initial load time and enhancing the user experience.
- Ensured cross-browser compatibility, responsive design, and multi-platform support, making the site accessible to a wider audience.

Frontend Developer Internship | [Certificate](#)

Jul 2024 – Feb 2025

Frontend Simplified

- Transformed a static book library app built with Next.js 15 into an interactive user interface, incorporating dynamic routing, pagination, and animations to enhance user experience.
- Integrated Firebase for secure authentication and Axios to fetch and display real-time data, implementing features like "Add to Favourites" and skeleton loading states for a smoother user experience.
- Collaborated in a virtual team environment using Git and GitHub to manage project workflows, conducting code reviews and following agile best practices, improving team efficiency.

Projects

Summarist Book Library | [Website](#) | [GitHub](#)

- Built a responsive book library app using Next.js 15, TypeScript, and Firebase, integrating Stripe for subscription payments and user authentication.
- Streamlined subscription payments with Stripe, allowing users to select and manage plans easily. Integrated.
- Utilized Redux for state management and Firebase for real-time updates, ensuring a scalable user experience.

Ultraverse NFT Marketplace | [Website](#) | [GitHub](#)

- Built an NFT marketplace using React, CSS, and Axios, enabling users to browse, filter, and purchase NFTs.
- Chose React for its component-based architecture, Axios for dynamic data fetching, and CSS for styling.
- Integrated filtering and sorting features to improve the browsing experience.

Twitter Clone | [Website](#) | [GitHub](#)

- Built a Twitter-like app using Next.js and Tailwind CSS, with tweet creation, commenting, liking, and retweeting features.
- Integrated real-time commenting, user authentication, and dynamic routing for a smooth experience.
- Optimized UI/UX with a responsive design and Redux for state management.
